Have you been in need of a truck, but do not want the hassle and commitment of buying one? We strive to help minimize stress for you as you tackle the many projects under your belt. Below are the top ten benefits of renting with Flex Fleet Rental.

- 1. No Long-term Commitment**
We know projects vary in time and employees needed. Rentals provide you with the flexibility to get the right number of trucks for the job and confidence that you have enough trucks for the employees on the job.
- 2. Truck Availability**
The truck market often fluctuates on the number of trucks readily available to buy. Renting your truck can guarantee you have trucks ready for your job instead of waiting for a microchip to be made or shipped.
- 3. Save on Maintenance Costs**
We only keep vehicles until they range from 35,000-50,000 miles in order to avoid any big maintenance and costly repairs. This saves money for you as the renter and ensures that the vehicle you are using will perform efficiently throughout the duration of your project.
- 4. Trucks Delivered to Your Job Site**
Flex Fleet delivers trucks directly to your job site which saves time haggling at the dealership or searching for the right truck to buy for the job.
- 5. Proper Registration and Apportioned Plates**
Registration costs can add up quickly, but when you choose to rent the rental companies cover the costs. We also provide the initial plates for the state the truck is located in.
- 6. Getting the Right Truck for The Job**
The ideal truck for each job may vary, or be hard to find for each project you work on. Renting allows you to get the perfect truck for each project without having to invest and purchase a truck every time.
- 7. No Up-front Capital**
What does no up-front capital mean? It means that you don't have to provide a down payment to start renting trucks for your fleet. When renting your fleet, the price you get quoted is the price you pay. There is no need to put down a huge down payment to make your monthly payments manageable for your company, saving you money in the long run for each project.
- 8. No Need to Resell or Remarket Trucks**
When you rent your trucks, there is no need to worry about the reselling of your fleet. The majority of the rental companies will take care of the reselling after they have replaced your truck.
- 9. Scalable Options**
Our customers often have varying fleet rental requirements, and we take pride in meeting our customers and helping them grow and scale their fleets as their needs increase. Our vehicle rental solutions are fully-scalable, giving you the confidence to have the right fleet for your job - no matter the size.
- 10. Customers are Our Top Priority**
Here at Flex Fleet Rental, it is our mission to help you accomplish your goals and projects. We can provide the 4x4s you need and keep our customers as our main focus.

What is a Fleet Vehicle?

A fleet vehicle is a vehicle that is owned by an organization and is used for that organization's work. Fleet vehicles can range in size and purpose, from the buses used by a city in their public transportation system to the small sedans offered by a car rental company.
